OVERVIEW

ALTA VISION SOLAR

The sun revolves around us day in and day out. We know it provides all the energy for our planet to support life. Just a short time ago, solar power was a groovy little niche industry in the broad field of energy generation. But something happened in the last couple years: Solar began making strides toward a future in which it will challenge, and perhaps out-compete other types of energy. We envision that day not to be far away. The freely available energy source offers unblemished energy throughout the year, allowing us to generate energy on our roofs and money in our pockets. You will have the luxury of enjoying eco-friendly, cost effective energy generated by your own Solar plant. We are happy to be a part of that cause together with you. With the best engineering solutions tailor-made just for you and best value for your investment, we, at Alta Vision Solar invite you to join the Solar Power Revolution.

Invest in your future, today!

2.6MWp SYNERGY POWER GROUP PROJECT:

EPC contractor :
Alta Vision Pvt Ltd
SCADA System :
Alta Vision Pvt Ltd

- Location :
Kahandamodara,
Ranna.
- Land area : 5.5 acres
- 69 tables of
solar PV modules

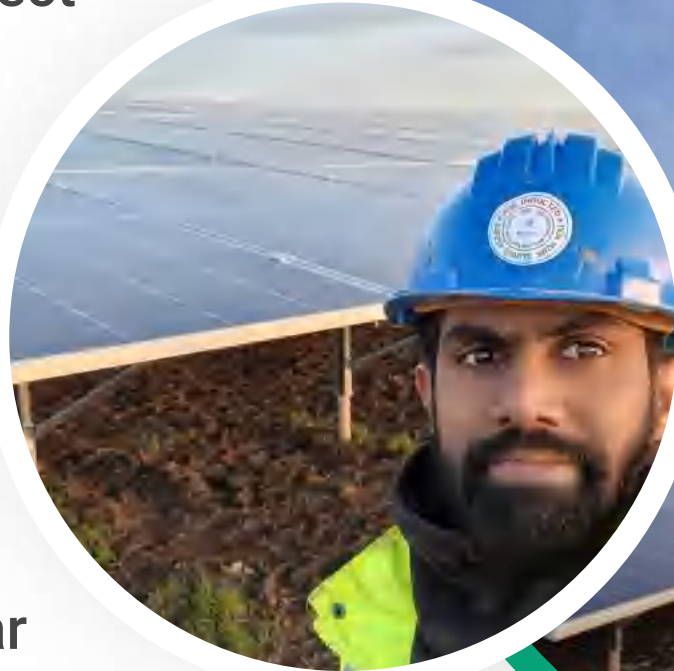

1MW PORT CITY PROJECT:

The first 1MW solar project at Port City Sri Lanka is a landmark achievement, being the first solar project in this prestigious development. This pioneering initiative supports Port City's vision of becoming an eco-friendly urban hub by providing clean, sustainable energy and setting a new standard for renewable energy in the region.

TECHNICAL EXPERTS

We have a dedicated technical staff with specialists in each of the key fields we are involved in. They are experts in identifying the relevant technologies, approaches, and platforms that would best suit the need since they keep up with the rapidly evolving state of technology. They are also skilled at applying all of them in a professional capacity. Additionally, our technical team always keeps our valued clients informed about their progress as well as other pertinent information in a sufficient and accurate manner.

Moreover, our very own team of technical professionals well understands the unique requirements and best possible solutions associated with the latest trends and technologies that a business may employee.

RESEARCH & DEVELOPMENT

The Research & Development (R&D) team at Alta Vision is well-trained and dedicated to dive deeper into the industry knowledge, market trends, demands of our customers, and all other relevant aspects. They lead us to create latest and perfect product/project outcomes emerging from the most effective approaches in the industry.

Our R&D team is in charge of making sure that our products and services consistently meets the ultimate customer satisfaction and causes the business to grow towards heights. Hence, their efforts and responsibilities goes beyond just R&D.

The Alta Vision R&D division is currently committed to develop an AI-Powered Mini Grid in collaboration with a foreign university, which will be a valuable invention made in Sri Lanka for the future of renewable energy of the entire world. Furthermore, the team is working on a brand new project where they aim of maximizing affordability, reliability and environmental sustainability by using the solar energy to charge e-tuk-tuk batteries, which we believe will be another precious invention by the talents of our country.

AR-MINI : AI-POWERED RENEWABLE MINI-GRIDS FOR RURAL AREAS IN SRI LANKA

Alta Vision (Pvt) Ltd, in collaboration with Robert Gordon University (RGU) UK and funded by Innovate UK, is developing AR-Mini, an AI-powered renewable mini-grid to provide reliable, affordable, and sustainable energy in remote Sri Lankan areas. The project combines solar panels, wind turbines, and battery storage with AI to optimize energy use and minimize grid reliance. The pilot deployment in Colombo features solar panels, a wind turbine, battery storage, and a generator backup. AR-Mini addresses the energy 'trilemma' by ensuring low-carbon, affordable, and reliable energy, aiming to transform rural energy access and promote global sustainable energy systems.

ADMS : AI-POWERED DEMAND MANAGEMENT SYSTEM FOR SRI LANKA

Alta Vision (Pvt) Ltd, funded by USAID's SAREP program, is implementing ADMS to address Sri Lanka's energy challenges by enhancing power grid efficiency, dependability, and sustainability. Utilizing smart devices, AI forecasting models, and user-interactive software, ADMS manages energy through remote monitoring, demand forecasting, consumption analysis, load shifting, and budget setting. The pilot deployment involves 50 locations in the Western Province, starting at Rajagiriya Royal Court, in collaboration with Lanka Electricity Company (LECO). ADMS offers benefits for utility companies and various users, providing valuable data for improving energy policies and practices. This project promotes sustainable energy management, contributing to global efforts for reliable, clean energy solutions.

REACT : RENEWABLE ENERGY ACCESS FOR THE CONVERSION OF TUK-TUKS

Early Stage

REACT, funded by Innovate UK under Energy Catalyst Round 9, aims to convert traditional tuk-tuks in Sri Lanka into electric vehicles (e-tuk-tuks) using renewable energy. The early stage of the project, a collaboration between Alta Vision (Pvt) Ltd, University of Surrey, and University of Sri Jayewardenepura, focuses on eco-friendly transportation through solar-powered charging stations and swappable battery architecture. This initiative reduces costs, eliminates wait times, and lowers carbon emissions, providing a sustainable and economically viable alternative to fossil fuel-powered tuk-tuks.

Mid Stage

REACT, funded by Innovate UK under Energy Catalyst Round 10, is led by the Alta Vision Solar UK Branch. This mid-stage project focuses on scaling the technology to convert tuk-tuks into electric vehicles with a Solar energy-charged Battery-as-a-Service "Swap and Go" model. It includes refining technical designs, conducting large-scale trials, and developing training courses. The initiative aims to reduce operational costs for drivers, decrease carbon emissions, and strengthen local economies by involving local garages and charge stations, promoting a sustainable and eco-friendly transportation solution.

WORLD CLASS ENGINEERING SOLUTIONS

You can buy the best equipment in the market. But it's all useless without the technical expertise. Hailing from the best technical universities in the country, our engineering team deals with the cutting edge technologies in their respective fields. The professionally qualified technical team spearheaded by the engineers will ensure the highest standard for your Solar PV System.

Our custom made mounting structures & electrical design will ensure you get the best performance out of the Solar PV System.

"The Smartest Energy Choice Under the Sun"

EQUIPMENT

In an era where Solar PV equipment are in abundance with many manufacturers entering the market, it is important to carefully choose the best equipment fitting the requirement. Choosing the German made SMA inverter and top performing Canadian Solar and Trina Solar modules has guaranteed the quality standards of an installation done by Alta Vision Solar. Since it is always a trade-off between cost and quality, Alta Vision Solar has also introduced a second line of inverters - GoodWe, the best inverter manufactured in China to reduce the cost while maintaining the desired quality of standards. Alta Vision is the authorized dealer of GoodWe inverters in Sri Lanka. The reputation of SMA, Canadian Solar, Trina Solar, GoodWe, Fimer, and DEYE brands over the years have made them highly sought after brands for Solar PV installations all over the world.

AFTER SALES

Alta Vision provides you with free services for 02 years for on-grid sites and 01 year for off-grid & hybrid sites with periodic on-site inspection. After that, the service goes to preventive maintenance.

Customers can enjoy the luxury of free electricity without having to intervene. Remote monitoring facilities offered by both SMA and GoodWe inverters allow us to constantly monitor the system for failures and power generation shortages.

Monitoring

CORPORATE RELATIONSHIPS

We have teamed up with both global and local partners to deliver the best solutions to you. Healthy relationships with our partners have been a key factor in our success. We work closely with relevant authorities in the country (CEB, LECO, Sustainable Energy Authority), financial institutions which fund domestic and commercial Solar projects, and our international vendors to ensure the quality of our equipment and to stay up to date on best global Solar PV technologies.

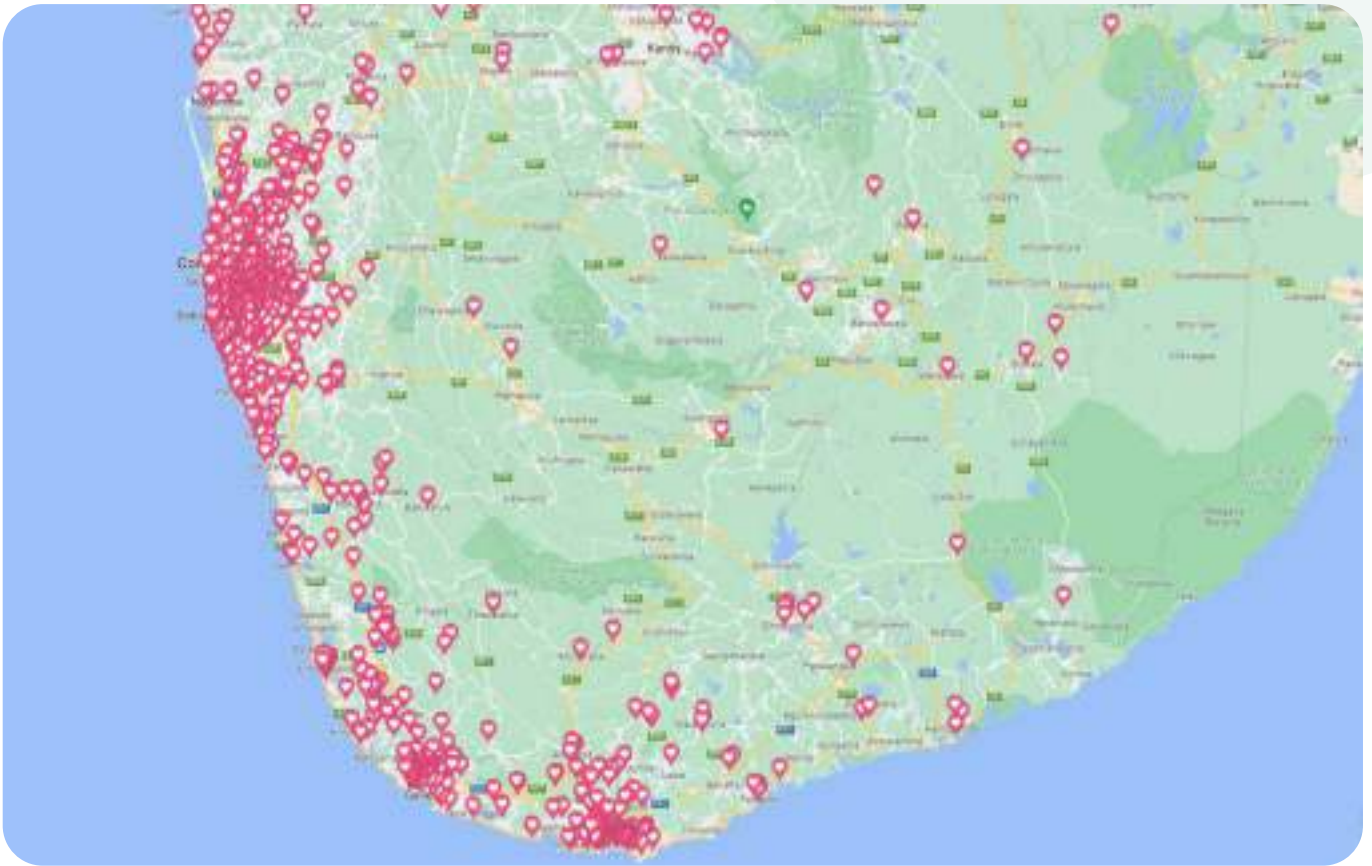

EVENTS AT ALTA VISION

Alta Vision annual event calendar is rich with cultural events, corporate social responsibility events and so on. These annual events allow our team of employees to understand how far the organization has travelled over the past years. Corporate gatherings at Alta Vision help the team members get to know one another better, and on such occasions, we celebrate company achievements, adding value for the team members as a mean of saying thank you and motivating them to achieve even more success.

OUR FOOTPRINTS

We have had our footprints in almost all the provinces in the country (20 districts so far). The island-wide & district-wise coverage is one of our ultimate goals. We're working to establish a strong presence throughout Sri Lanka, and we have plans to travel international markets soon with the brand name of Alta Vision.

OTHER SUBSIDIARIES AND INVESTMENTS

Alta Vision Power offers services in the construction and power distribution domains.

Alta Vision (Pvt) Ltd. has been accredited as a C-4 grade construction company by the Construction Industry Development Authority (CIDA) in Sri Lanka.

Our products and manufacturing division focuses on ventilation duct manufacturing, electrical panel-board manufacturing and powder coating.

Southern Lanka Hospitals, inaugurated in January 2019, is a healthcare center in Tangalle, which aims to provide a healthcare experience that is beyond just a service. The hospital has channeling, OPD/ETU, laboratory facilities, residential care, and surgery facilities.

QAD Networks is one of the leading trade manufacturers and suppliers of bespoke copper, fibre, power and coaxial assemblies to B2B specialist markets in the structured cabling industry in the United Kingdom. Since our foundation in 2009, we have worked with both major companies and smaller firms, across the UK, Europe and worldwide, proving them with high - quality fibre optic and Copper products for the data communication, networking and telecommunication industries.

Our creative experts at Syntax Genie are committed to delivering the best digital solutions that transform your ideas, businesses and communities into fast-growing giants in your relevant industries.

With the diverse experience gained through successful local and global projects, Syntax Genie is well – equipped to provide the best quality digital solutions and services through proper planning, effective coordination, and constant evaluations.
